Amanda's Imaged Treatment Plan - Dental Ceramics

## Digital Smile Design - See your Treatment Plan before treatment begins

Dr. Truman uses **Digital Smile Design, aka Cosmetic Dental Imaging**, as a diagnostic tool, to help patients to visualize the goals of a treatment plan, before treatment has actually begun.

**Klausz Dental Laboratories** helped with this digital smile design and also refer to these images when creating the ceramic restorations. Cosmetic Imaging begins with patient involvement and approval and provides a goal for the entire dental team. This unique step in treatment planning means that patients are more likely to receive the new smile that they want and expect.

Cosmetic Imaging is a digital visualization of a specific treatment plan. Changes to the prescribed treatment plan as well as technical or physical considerations will alter the final result and will not precisely match this computerized image.
